## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-20 are allowed over prior art.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-10, none of the prior art teaches or suggests a surface inspection method by detecting positions of optically detected defects on the surface of the object, classifying the detected according to their features and performing x-ray analyses on the detects based on the positions and the features of the defects as claimed in independent claim 1.

Claims 2-10 are allowed by their virtue of dependency.

Regarding claims 11-20, none of the prior art teaches or suggests a surface inspection apparatus having an optical inspection means for inspecting a surface of an object optically, a processing means for detecting positions of detecting defects and classifying their feature from the optical inspection means, and a x-ray inspection means for performing an x-ray analyses selected or picked by the processing means as claimed in independent claim 10.

Claims 12-20 are allowed by their virtue of dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Grodzins et al. (US 6801595B2) teaches x-ray fluorescence combined with laser induced photon spectroscopy but fails to teach the step of detecting positions of the defect.

Nasser-Ghodsi et al. (US 6810105B2) teaches a method and apparatus for dishing and erosion characterization but fails to teach the allowable subject matter above.

Chen et al. (US 6590645B1) teaches an optical system for classifying and locating defects on sample surface but fails to the x-ray analysis.
